

Light Tape helps to create a special type of style at the Earl of Doncaster Hotel

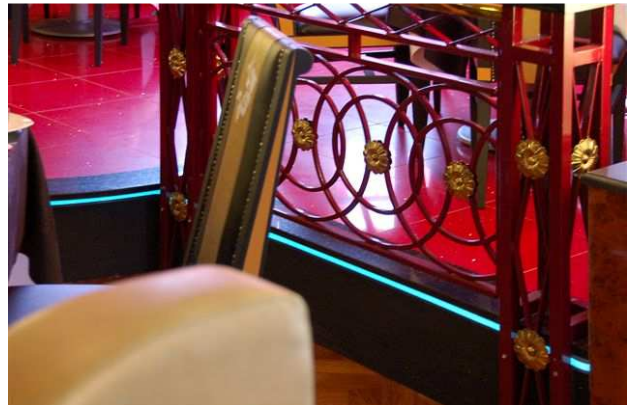

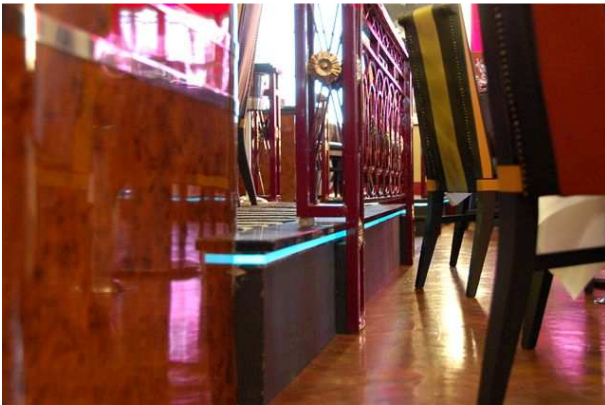

Light Tape was recently installed at the Earl of Doncaster Hotel in Doncaster, South Yorkshire as part of the refurbishment of the hotel's restaurant. Reopening under the name of, Cafe Bar Concerto, the restaurant is in keeping with the traditional Art Deco Style of the rest of the hotel and whilst the Light Tape is used as part of an ensemble of different lighting styles around the upper part of the room, it also offers the added benefit of providing safety lighting around the lower areas, distinguishing the varying floor levels and small steps and helping to prevent accidental tripping. The comfortable ambience of the restaurant offers a relaxed atmosphere in which to dine and the overall effect of decor, lighting and 1930's character not only exudes the opulence of a bygone era but also helps to draw you back for more again and again.

Add a touch of light around the upper edges of the walls in a room, at ceiling height to add height and interest. You can create the "sky scraper" effect and bring design ideas to life whilst effecting a touch of class as you combine Light Tape with other lighting forms to really bring a room to life. With Light Tape the only limitation is the limits of your imagination.

By simply adding 1/2" Light Tape® around the edge of the risen floor areas and across the steps leading down to the lower level of the dining area you not only address the possibility of a trip hazard but effectively highlight and enhance the floor area too. And, the beauty of using Light Tape is that the running costs prove to be much, much less that of other decorative lighting.

What is Light Tape®?

Light Tape® is made up of metal ribbon coated in Sylvania phosphor and encapsulated in a Honeywell laminate. Light Tape® has no glass, no gas, and no mercury/heavy metals and so is user and environment friendly. Light Tape® provides an 85% - 90% energy saving against other commercially available light sources such as Neon and Cold Cathode and due to its thinness (just 0.5mm thick, as thin as a business card) and being lightweight, affords inherent flexibility of use providing a neater, modern, space saving alternative that is easy to install with little to no maintenance and has a long working life.
