

Light Tape Extreme Green Snap-N-Light

Going Green has Never Been Easier

Light Tape UK announce the introduction of the Snap-N-Light extrusion system for use in conjunction with the new, Extreme Green Series of Light Tape for outdoor display lighting and building decoration applications.

The Snap-N-Light System is the perfect solution for fixing the Light Tape in place whilst also providing protection from the elements. It is extremely user friendly and consists of Mounting clips and Extreme Green Light Tape already encased in clear plastic extrusion, ready wired and ready for installation providing an IP68 rating. Quite simply this lighting system is so easy to install it will take your breath away.

Compared to the installation of the more traditional forms of accent lighting Florescent, Cold Cathode and Neon, which can prove to be fiddly problematic and time consuming, the Light Tape Snap-N-Light System provides a quick, simple and modern solution that 'does what it says on the tin'. Once the clips are fitted on to the structure being dressed the encapsulated Light Tape is literally clipped in to place. It's as easy as that.

Light Tape Extreme Green Series tape is offered for use in outdoor application though it is equally suited for indoor projects too. With an extended life of 40,000 hours 20% more than the standard Light Tape product and consuming less than 1 Watt of energy per meter Extreme Green is extremely economical to run.

You can illuminate 100 feet of Extreme Green Light Tape for as little as £20.00 per year, with up to 10 years of useful life making it the perfect solution for long life applications such as accent lighting for Architectural projects as well as Venue (Restaurants, clubs etc) and Health and Safety, both internally and externally.

This next generation Light Tape is lighter, brighter and more economical to run with an array of eye catching new colours that provide a crisp, highly visible light source that is vibrant and exciting.
