BARNSLEY, ENGLAND

PolyLight™ has been fully endorsed by Tommy Walsh, Mr. Walsh comments:
"This is one of the most innovative products I have seen, PolyLight products will be a massive benefit to the Health and Safety industry"

For more information go to: www.PolyLight.co.uk

PolyLight™ is available in a variety of sizes with either 12mm and 25mm illuminated strips for both indoor and outdoor stairs with 6 grades of anti slip, in a variety of colours for both the anti slip insert and the Light Tape®. PolyLight's connections are embedded in resin making the product waterproof for outdoor use.

PolyLight™ anti-slip illuminated inserts have been developed primarily to fit into standard Aluminum profiles, timber stairs and decking though it can be applied in other applications.

Light Tape® is less than 1mm thick and allows the PolyLight™ stair nosing insert to be produced with a profile the same thickness as traditional non-illuminated products.

Light Tape® uses less than one tenth of the power and is one third of the price of Neon and Cold Cathode display lighting, it is flexible, easier to install and maintain, reduces light pollution, produces no waste heat or infrared light, is fully recyclable, uses No Gas, No Glass and No Mercury.

For more information on Light Tape® e-mail: info@lighttape.co.uk or call on: 08456 170 697.

The DDA (Disability Discrimination Act) has recently been updated to provide extra protection to the Partially Sighted, putting emphasis on both the illumination of Stairs and making columns and pillars in public areas more visually apparent. Light Tape can assist in both these areas with cost effective simple solutions.

Light Tape® with its wealth of benefits, versatility, ease of application, cost effectiveness and extremely low carbon footprint is fast becoming the chosen, viable alternative to more traditional forms of display lighting.

(1 Watt per Meter at 25mm (1") wide, a 100m length of 25mm wide Light Tape® only uses the same power as a 100w light bulb).

What is Light Tape®?

Light Tape® is made up of a DuPont metal ribbon coated in Sylvania phosphor and encapsulated in a Honeywell laminate. Light Tape® has no glass, no gas, and no mercury/heavy metals and so is user and environment friendly. Light Tape® provides an 85% - 90% energy saving against other commercially available light sources such as Neon and Cold Cathode and due to its thinness (just 0.5mm thick, as thin as a business card) and being lightweight, affords inherent flexibility of use providing a neater, modern, space saving alternative that is easy to install with little to no maintenance and has a long working life.
